

Yuwen Cui

ycui@usf.edu | (813)-5606734 | <https://www.yuwencui.com> | Tampa, FL

RESEARCH INTERESTS

- Side-channel attack in system security: Analyzing system and hardware patterns to identify privacy leakage during resource processing and data computation.
- Side-channel attack in cybersecurity: Analyzing network traffic patterns to infer users' activities during website access.
- Side-channel attack in AI security: Analyzing user-AI agent network traffic to infer user private information like career, identify AI models/versions, and recover prompt-related information.

EDUCATION

Ph.D. in Computer Science University of South Florida Tampa, FL	08/2021 – 12/2026
Graduate Coursework in Computer Science University of North Texas Denton, TX	01/2019 – 08/2021
M.S. in Computer Science China University of Petroleum Qingdao, China	08/2015 – 05/2018
B.S. in Computer Science Lanzhou University of Technology Lanzhou, China	09/2011 – 05/2015

EXPERIENCE

University of South Florida | Tampa, FL 08/2021 - Current

Research Assistant

- Conducted research in cybersecurity and AI security, investigating novel attack and defense techniques to enhance modern computing systems and user privacy.
- Designed, implemented, and evaluated research prototypes, integrating programming, system development, and experimental analysis to advance research objectives.
- Performed literature reviews, analyzed experimental results, and drafted research manuscripts for peer-reviewed publication.

Teaching Assistant

- Led laboratory sessions and provided hands-on guidance with programming over 100 undergraduate students.
- Supported instruction in undergraduate courses on secure coding, enhancing student understanding of key concepts.
- Held weekly office hours to help students understand course material and debug programming projects.
- Evaluated assignments, projects, and exams with standardized rubrics, ensuring fair and consistent grading.

University of South Florida | Tampa, FL 05/2026 - 08/2026

NSF REU Mentor

- Mentored undergraduate researchers in NSF REU cybersecurity project on website fingerprinting and encrypted traffic analysis, guiding students in applying deep learning techniques for traffic classification, evaluating fingerprint attacks and defenses, and conducting experiments to address privacy challenges in network security.
- Guided students through academic and personal challenges effectively.
- Facilitated workshops on study skills and time management techniques.

University of North Texas | Denton, TX 01/2019 - 07/2021

Research Assistant

- Designed and implemented NoC architecture, evaluated system performance, and analyzed experimental data using state-of-the-art research methodologies.
- Developed research prototypes and reproducible experiments using Python, C/C++, Linux, and CUDA.

- Collaborated with faculty and graduate researchers to develop and submit projects to academic conferences, enhancing research visibility.

Teaching Assistant

- Supported instruction in undergraduate courses in Computer Organization and Architecture course with 100+ students.
- Conducted ARM programming labs and supported student learning.
- Conducted weekly office hours to clarify course material and assist students with programming project debugging.
- Graded assignments, projects, and exams using standardized rubrics.

PROJECTS

Privacy-Preserving Defenses Against Website Fingerprinting Attacks 09/2025 - current

Developed privacy-preserving defense mechanisms against website fingerprinting attacks on encrypted traffic. Evaluated the robustness of existing defenses against adaptive machine learning-based attackers and explored techniques to improve privacy protection while maintaining network performance.

- *Github:* <https://github.com/WF-Attack-and-Defense/chameleon>

Time-Series Large Language Models for Website Fingerprinting Attacks 09/2025 - 02/2026

Developed a robust website fingerprinting framework that leverages time-series large language models (TSLMs) to improve resilience against model drift in encrypted traffic analysis. TSLM addresses the challenge of evolving network environments by learning long-term temporal traffic patterns and adapting to changes in website behaviors over time. The project explores the application of LLM-based sequence modeling for privacy analysis and demonstrates improved robustness against real-world traffic distribution shifts.

- *Github:* <https://github.com/WF-Attack-and-Defense/wf-tslm>

Wi-Fi Fingerprint-Based Device Localization and Tracking in Public Wi-Fi Networks 05/2024 - 05/2025

Developed a machine learning-based device localization and tracking system using Wi-Fi fingerprinting techniques with Received Signal Strength Indicator (RSSI) and Round-Trip Time (RTT) measurements. The project extracts wireless signal features from public Wi-Fi environments and applies machine learning models to estimate device locations and improve localization accuracy under dynamic network conditions. This work investigates the challenges of signal variability, wireless positioning, and privacy risks associated with device tracking in public Wi-Fi networks.

- *Github:* <https://github.com/RxStalker/RxStalker>

Shared Resource Vulnerability Analysis in Serverless Computing 05/2022 - 05/2023

Investigated security vulnerabilities in multi-tenant serverless computing environments by analyzing shared resource interference between co-resident serverless functions. Developed and evaluated a Shared Resource Entanglement (SRE) attack that demonstrates how attackers can infer sensitive information through memory access and resource usage patterns, highlighting potential data leakage risks in Kubernetes-based serverless platforms and motivating stronger isolation mechanisms.

TEACHING EXPERIENCE

Graduate Courses Teaching Assistant:

- CIS6220 - Penetration Testing for IT, University of South Florida, Fall 2026.
- CNT6410 - Emerging Topics in Network Security, University of South Florida, Spring 2025.

Undergraduate Courses Teaching Assistant:

- CIS4200 - Penetration Testing for IT, University of South Florida, Fall 2026.
- CAI5107 - Machine Learning, University of South Florida, Fall 2026.
- CNT4419 - Secure Coding, University of South Florida, Spring 2022, Fall 2022, Spring 2023, Fall 2023, Spring 2024, Fall 2024, Fall 2025, Spring 2026
- CNT6410 - Emerging Topics in Network Security, University of South Florida, Spring 2025
- CSCE 2610 - Assembly Language and Computer Organization, University of North Texas, Fall 2019, Spring 2020, Summer 2020, Fall 2020, Spring 2021, Summer 2021
